Confirmation of measurement accuracy

This is to confirm that the model-type breathalyzers

ACE II Basic plus (AL9000)

which are determined by

ACE Handels- & Entwicklungs GmbH
Staufenstr. 1
83395 Freilassing
Germany

are always in optimum operating condition and calibrated at the time of delivery. The measuring tolerance of the electrochemical sensor integrated in the ACE II Basic plus (AL9000) is ± 0.05 per mil.

At the time when an ACE II Basic plus (AL9000) is delivered, it is ensured that - calculated from the date of shipment of the goods - the next calibration according to the operating instructions of the ACE II Basic plus (AL9000) is due either after 1.000 (one thousand) tests or after 12 (twelve) months - depending on which event occurs earlier.

With kind regards

ACE
